The authors regret a typographical error in Table 3 (page 101) of the original article. The scale item FSE15 – “Compared to other activities, cooking brings me little enjoyment” should be scored in reverse, and should have been marked as such with a “†”. The corrected table is presented below.

All statistics presented in the original paper were calculated with FSE15 reversed, and so the table is the only error. However, those wishing to use this scale in the future should be aware of the correct scoring.

We apologize sincerely for any inconvenience we have caused.
